Materials

- A clear glass or plastic container
- Water
- A photo
- A straw or a toothpick

Instructions

1. Fill the container with water. 2. Place the photo in the water. 3. Use the straw or toothpick to gently push the photo up from the bottom. 4. The photo will appear to levitate in the water.

How it works

The photo levitates because of the surface tension of the water. Surface tension is the force that causes the surface of a liquid to act like a thin skin. When you push the photo up from the bottom, the surface tension of the water pulls the photo back down. However, the force of your push is greater than the force of the surface tension, so the photo levitates.

Tips

* Use a clear container so that you can see the photo levitating. * Use a photo that is lightweight and has a smooth surface. * Be patient and practice until you can levitate the photo for a long period of time.

Variations

* You can use different liquids to levitate photos. For example, you can use oil or honey. * You can also levitate other objects, such as coins or small toys. * You can use your mind to levitate objects. This is a more advanced technique, but it is possible with practice.

Levitation is a fun and easy way to add a touch of magic to your life. With a little bit of practice, you can learn how to levitate your favorite photos using water. So what are you waiting for? Give it a try!
